Excellent global performance on various materials

Our AD Shortdipole inlays and tags are designed and optimized for global retail, industry and supply chain applications, offering excellent performance in many situations, including on lower detuning materials like cardboard, plastics, corrugated boxes and RTIs.

Shortdipole inlays and tags are a size-optimized 100 mm / 4 inch form factor, making them suitable for use with a wide range of supply chain labels, and are available in dry, wet and label / sticker delivery formats.

They are now offered with the Impinj Monza R6 and R6-P chips that come with an autotune feature, which helps the AD Shortdipole product to work at peak efficiency, even in rapidly changing environments. AD Shortdipole with the Monza R6 chip offers a unique TID and enables pre-serialized EPC. Inlays with Monza R6-P offer additional features such as add-on user memory and on-demand memory configuration as well as a kill function and easy access control to change tag information for store data, if required.

Our inlays and tags are compliant with ISO 9001:2015 Quality Management and ISO 14001:2015 Environmental Management, which ensure a reliable and state-of-the-art product that meets a variety of application needs, enhancing RFID usage for difficult-to-tag materials.
